## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 3/7/2007 has been entered.

### ***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1- 9 and 13 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The new limitation of the cross-section being trapezoidal is a new matter. The specification does not point to any significance to a certain shape as long as  $b > a$ .

4. The new limitations of (b-a) being in the range from 50 $\mu$ m to 35 mm in claim 2 and being in the range from 10mm to 30 mm in claim 9 is new matter. The specification does not attribute any special significance to (b-a) being minimum 50 $\mu$ m.

***Claim Rejections – 35 USC § 102***

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

6. **Claims 1-9 and 13 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Aruga et al (US 5688331).**

Aruga et al disclose a wafer holder for semiconductor manufacturing equipment (Fig 6-39) with a diameter of the wafer-carrying surface clearly smaller (more than 50 $\mu$ m) than the diameter of the opposite side. The wafer holder is disclosed to be of ceramic (abstract) with embedded heating element (43). Aruga discloses the diameter gradually expanding (Col 5 lines 10-15).

7. **Claims 1-9 and 13 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Koichi Nagasaki (JP 09045758).**

Koichi Nagasaki discloses a wafer holder for semiconductor manufacturing equipment (Fig 1) with a diameter of the wafer-carrying surface clearly smaller than the diameter of the opposite side. The wafer holder is disclosed to be of ceramic (abstract) adapted for heating element (Paragraph 1). Koichi Nagasaki discloses the diameter gradually expanding and the difference b-a could be in a range of 3-24mm (calculating by thickness and angle range disclosed).

Art Unit: 1763

***Response to Arguments***

Applicant's arguments filed 3/7/2007 have been fully considered but they are not persuasive.

Applicants argument that for a given (b-a) a trapezoidal configuration provides lowest lateral surface area is not persuasive since the specification is silent about this conclusion. In fact specification does not provide any significance to shape as long as  $b > a$ .
